Famabria

FAMILY CALENDAR

Free · Open source · No account

One calendar for the whole family.

Notes and reminders that appear on every phone and computer at home. Private by design, even without internet.

Month view with the selected day, on desktop and phone.

FEATURES

Month & week at a glance

See the whole month, or switch to a week with one tap. Moon phases and week numbers are optional.

Notes in seconds

Add a title, an optional time and a note. Everyone gets their own colour.

Reminders on your phone

Choose a reminder, such as the day before at 18:00, and your phone buzzes at the right moment.*

**optional extra, see requirements*

A colour for every member

Marco, Giulia, Sofia, Luca: show everyone, or only one person, with a tap.

Search everything

Type a word and find every note across months, grouped and highlighted.

Works offline

Your notes live on your device first. Add notes on the train; they sync when you are back online.

Local-first: your notes stay on your device

HOW IT WORKS

1 Get Started

Install and say your name. Use it alone, or choose 'With my family'.

2 Invite Relatives

Create a family and send a one-time invite link, valid for 15 minutes.

3 Everyone in sync

Everyone sees the same calendar, on every phone and computer.

Private by design.

- **End-to-end encrypted:** the relay only ever sees unreadable data.
- **No account,** no ads, no tracking.
- **Open source (MIT):** read the code, host it yourself.

REQUIREMENTS & COMPATIBILITY

What you need

- ✓ Chrome (110+), Brave or Firefox (128+) on a computer, or any modern phone browser (Add to Home Screen).
- ✓ That is all to use it alone: no account, no server.
- ✓ Languages: English and Italian.

Optional extras

- + **Share with your family:** a free relay (a free Cloudflare account, ~10 min, once) or family Dropbox. Family members just open the link.
- + **Reminders on the phone:** small program on an always-on PC at home (Docker) and free ntfy app. Titles pass through ntfy.sh unless self-hosted.
- + **Your own home server (advanced):** computer on home network. Optional, most families will not need it.

Add to Chrome | Add to Firefox | *Also works in Brave*
